(57) ABSTRACT

(21) Appl. No.: 09/937,282

A game machine (2, 200) which includes a playing field (6, 301) traversed by objects, such as balls (320). The playing field can have plural drop zones (361-383) which can be selected by the player using deflectors (106-110) that control where the balls are launched. Detectors (22, 392) indicate scoring positions assumed by the balls. A payline display (28, 335) displays scored events. A symbol selector is included to select symbols which are variably assigned to the scoring positions and displayed on displays (26, 397). The balls score symbols which can be displayed in the payline display and affect winning or bonus play. Game machine (200) includes traditional slot machine reels which works in conjunction therewith.

(54) Title: **WIRE-COIL PACKAGING DRUM WITH IMPROVED BOTTOM ASSEMBLY**

(57) Abstract

An improved wire-coil packaging drum comprises a drum (10A) with a bottom heading (60) having a hole (62), and an anchoring member mounted to the bottom heading (60) and cooperating with the hole (62) such that an anchoring portion (76) of the anchoring member (70) is disposed to anchor a hold-down system for a wire coil received in the drum. The anchoring member may comprise a snap-mounted plug that is conveniently inserted into the hole (62) of the bottom heading (60), with the hold-down system comprising an elastic loop, such as a rubber band (80), which may be secured to the plug by a cable tie (82) or the like.
